## SI Structured coursebooks and workbooks

When planning the programme for the new school year, chose the coursebooks and workbooks for the grade 3 pupils from the same publisher. It was with a reason. The coursebooks are use to teach the following school subjects: Slovenian, Maths and Nature&Environment.

We chose them after examining different materials available in the country and decided on the ones, that covered the standards of our national curriculum. We paid a lot of attention to the structure of the units, texts, exercises and differentiated tasks in order to accomodate different types of learning styles, different levels and different abilities.

In a way these materials are also interdisciplinary, which we find very important. We are also focused on developing raeding and social skills. The pupils are encouraged to learn from each other, help each other and participate in pair and group activities.
